

questions and place in the applicable boxes. Do not use whiteout or covering stickers. Sign next to any corrections with your full signature (not initials).

File Handling in C++

File "A file is a logical collection of records where each record consists of a number of items known as fields". The records in a file can be arranged in the following three ways: • Ascending/Descending order: The records in the file can be arranged according to ascending or descending order of a key field..
